Channelling tasks encourage and reinforce hand-eye coordination by asking the child to draw a line between two guiding lines. As children draw lines between them, they simultaneously trace and compare their developing lines with the guiding lines. This constant checking of the distance of the child's drawn line from the guiding lines reinforces the fine-motor control of hand movements.

Channelling activities strengthen visual-motor integration and fine-motor control of hand and finger movements and lead to the acquisition of basic graphomotor, fine-motor and pre-writing skills and competences that will later play an important role in the development of writing and other specific finomotor skills.

## What the science says about visual motor training?

### Science fact:

Visual-motor exercises create functional connections among visual and motor regions in brains.

### Science fact:

Interrelation between fine motor skills, non-verbal intelligence and executive functioning.

### Science fact:

Visual-motor exercises improve graphomotor skills which are important predictors of later academic achievement.

## About BrainscribED Workbooks Collection

A **comprehensive** collection of **5.600 +** worksheets and **30.000 +** activities aimed at helping the development of visual-motor integration and graphomotor skills in children.

Visual-motor integration development is stimulated by **fun** and **user friendly** activities tailored for children at different developmental stages and levels of skills.

**Every** child's visual motor integration and skills development can **benefit** from graphomotor/visual-motor tasks and training at home or in a classroom.

Teachers and other professionals working with children with visual motor integration problems or/and with writing problems will find a plentitude of useful and engaging tasks for a **systematic intervention** in BrainscribED workbooks.

BrainscribED workbooks provide **parents** with developmentally appropriate and gradually challenging tasks for their children as well as they offer **teachers** and other **experts** (preschool, school, special education, therapy, etc.) appropriate and gradually challenging tasks according to developmental needs of their children.

## Types of BrainscribED Activities
