FIND AND DRAW THE PATH OUT OF THE MAZE.

FIND AND DRAW THE PATH OUT OF THE MAZE.

Maze-solving activities develop children's executive functioning skills and strengthen visual-motor integration and fine motor control of hand and finger movements. When solving mazes, children look for different strategies and use the ones that seem most promising for each task. Deciding between different strategies, for example which side to approach the maze from, develops their judgement and decision-making skills.

Solving mazes requires the child to observe the worksheet with his/her eyes to find possible solutions, while drawing a line through the maze and taking care not to touch or cross the border with the pen. Therefore, in addition to helping children develop executive skills, solving mazes strengthens hand-eye coordination, fine motor control and mastery of the writing instrument.

## What the science says about visual motor training?

### Science fact:

Visual-motor exercises create functional connections among visual and motor regions in brains.

### Science fact:

Interrelation between fine motor skills, non-verbal intelligence and executive functioning.

### Science fact:

Visual-motor exercises improve graphomotor skills which are important predictors of later academic achievement.

## About BrainscribED Workbooks Collection

A **comprehensive** collection of **5.600 +** worksheets and **30.000 +** activities aimed at helping the development of visual-motor integration and graphomotor skills in children.

Visual-motor integration development is stimulated by **fun** and **user friendly** activities tailored for children at different developmental stages and levels of skills.

**Every** child's visual motor integration and skills development can **benefit** from graphomotor/visual-motor tasks and training at home or in a classroom.

Teachers and other professionals working with children with visual motor integration problems or/and with writing problems will find a plentitude of useful and engaging tasks for a **systematic intervention** in BrainscribED workbooks.

BrainscribED workbooks provide **parents** with developmentally appropriate and gradually challenging tasks for their children as well as they offer **teachers** and other **experts** (preschool, school, special education, therapy, etc.) appropriate and gradually challenging tasks according to developmental needs of their children.

## Types of BrainscribED Activities
